Infant & Child  
Medical Music Therapy

# Helping NICU Music Therapy Reach **New Heights.**

## NICU-MT CERTIFICATE

### WHO WE ARE

**TRAINING:** The NICU-MT Certificate provides a unique experience comprised of three training components that equip participants to confidently apply targeted music therapy interventions for infants and families in the NICU.

**RESEARCH:** Our mission is to provide an international focus on research, evidence-based clinical practice, and professional training in the efficacy of music therapy for enhancing and humanizing medical treatment of infants and children.

**NETWORK:** When collaboration is present, music therapy achieves the greatest outcomes. As a community, the utilization and implementation of music therapy does not only consist of music therapists but includes caregivers, teachers, therapists, healthcare providers, and YOU!

### NICU-MT CLASS

Our eight-hour NICU-MT class begins with a strong foundational overview of infant development beginning from the 3rd trimester. With an emphasis on safe and effective infant stimulation, as well as a thorough review of literature that emphasizes the incredible benefits of music therapy from birth to childhood.

### CLINICAL FIELDWORK

During our two-day clinical fieldwork, participants will be trained on the compelling step-by-step hands-on application of Multimodal Neurologic Enhancement and of the Pacifier Activated Lullaby (PAL®). Our program combines resources for program development, familial support, infants with NAS, and individualized feedback pertaining to participant's specific needs or interests.

### READINGS & FINAL EXAM

Now having completed both the NICU-MT class and clinical fieldwork, the final step will be to review the provided training materials for successful completion of a final exam. Passing of this exam will result in a certificate of completion, addition of your name to our Master Registry, and the earned designation of NICU-MT.
